

Quality care, anywhere

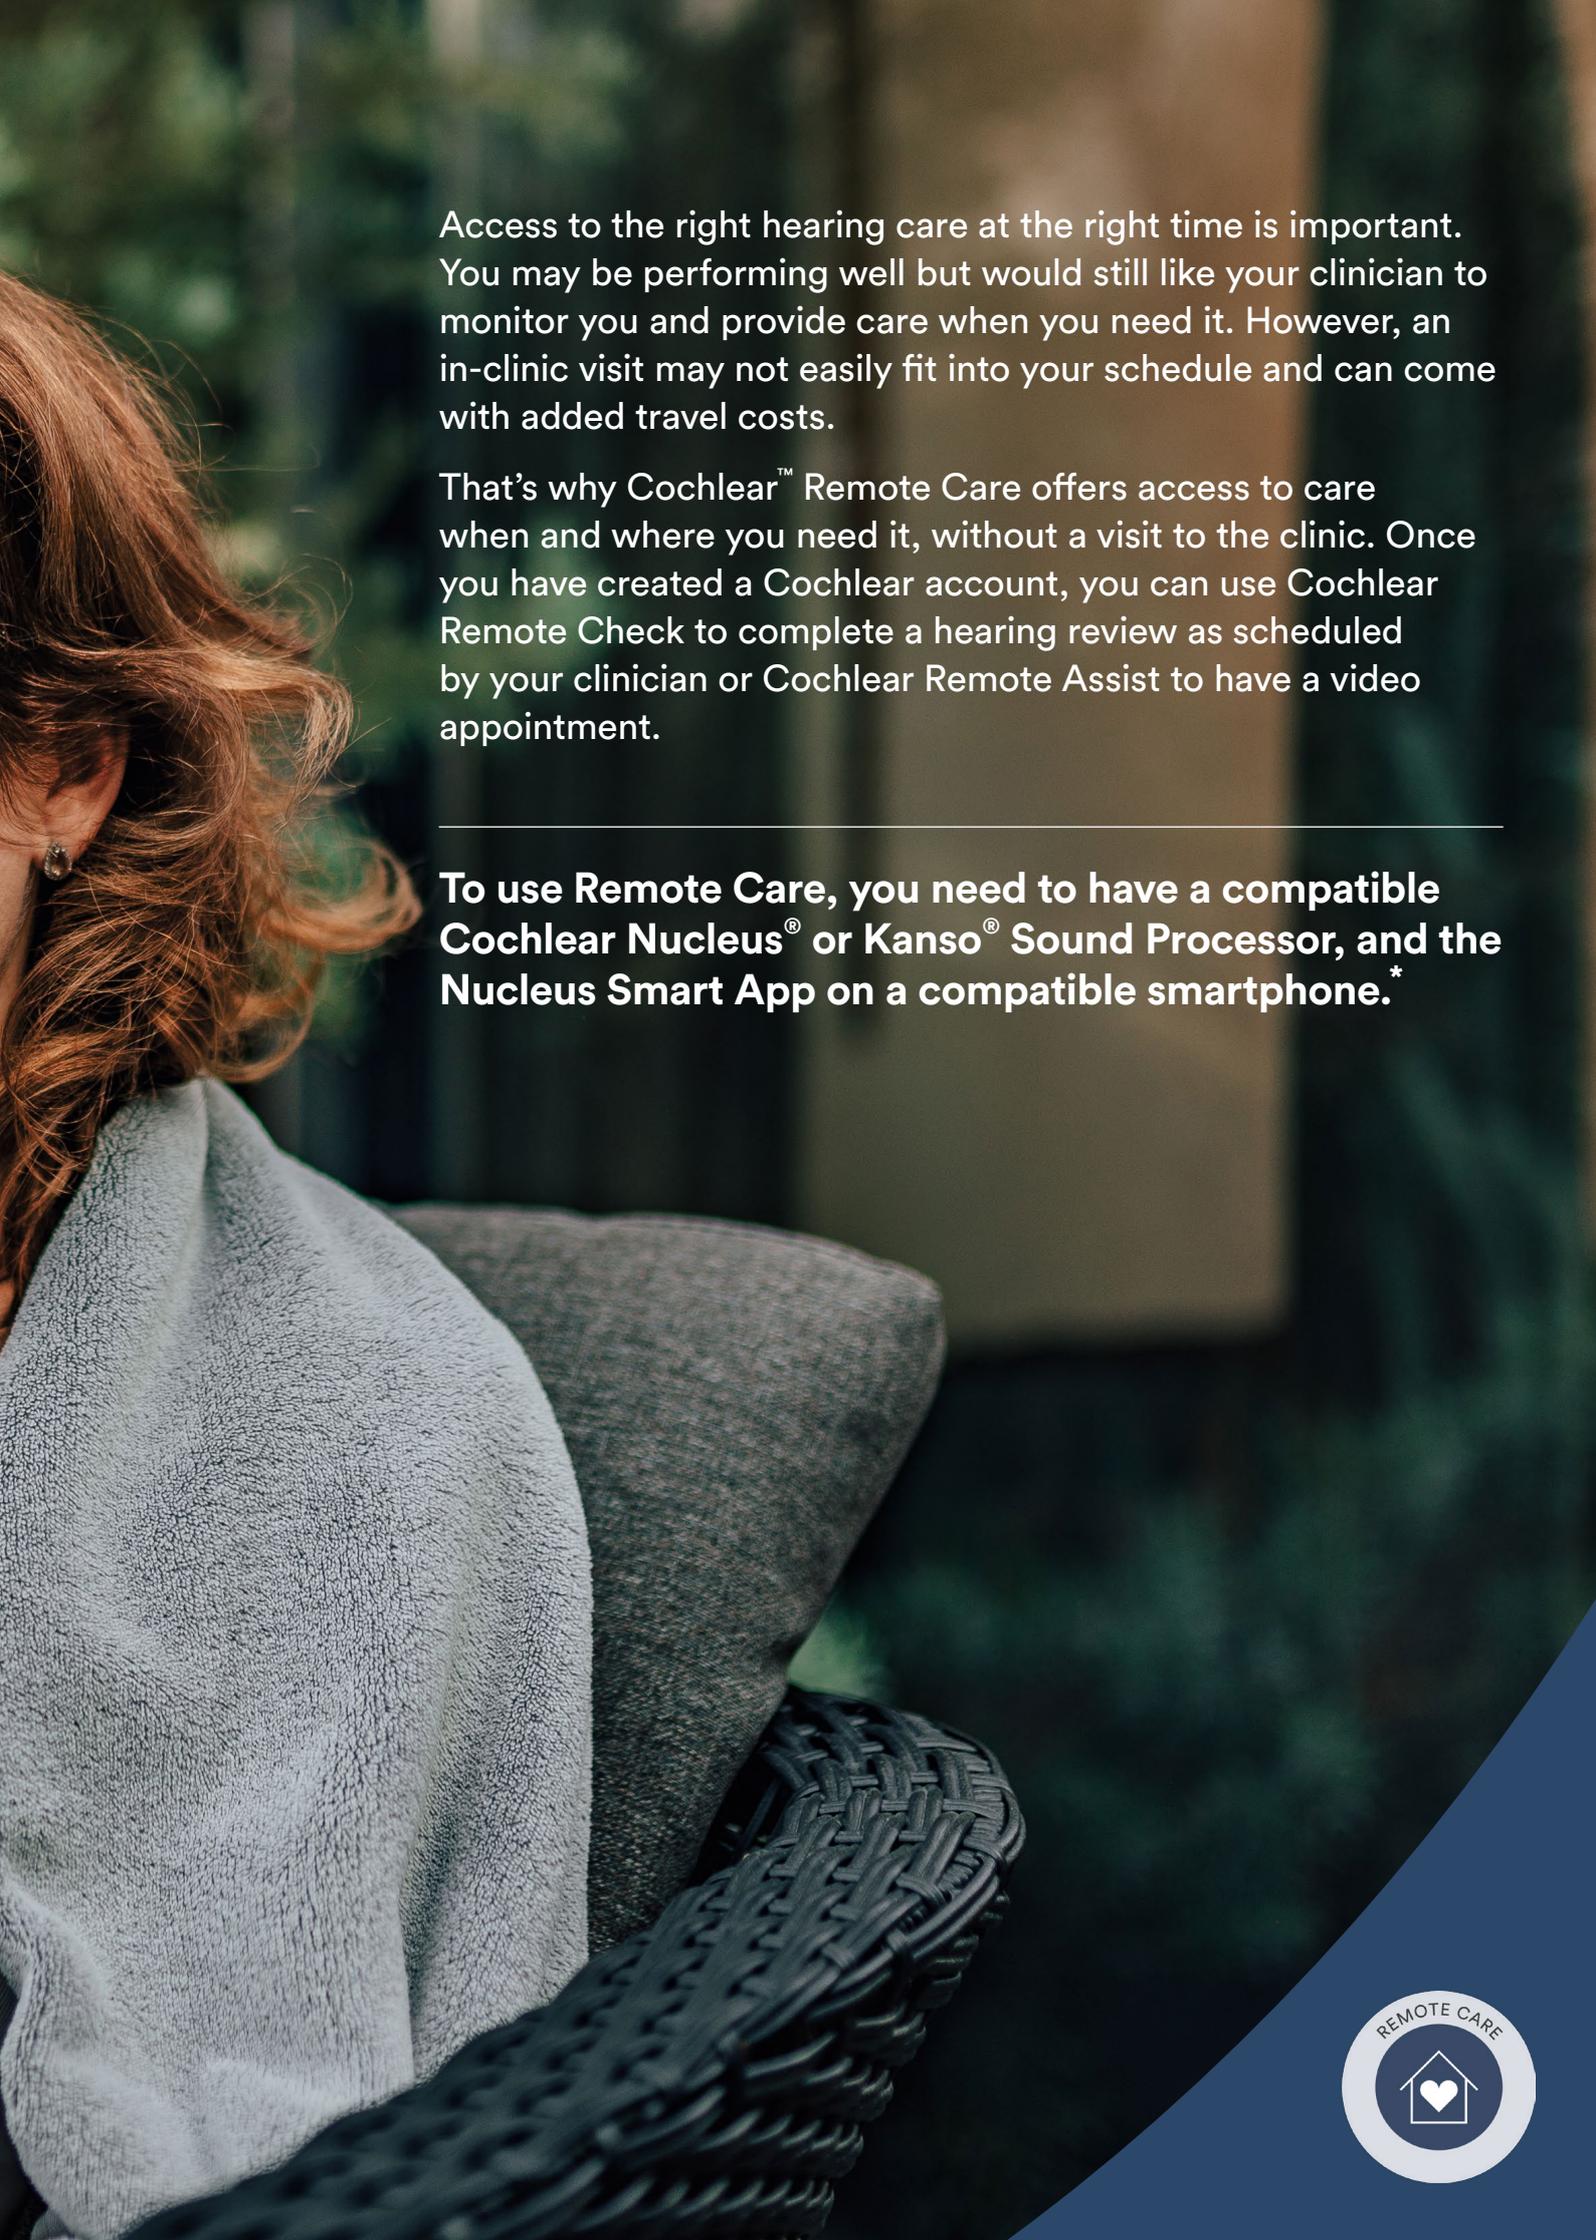

Cochlear™ Remote Care for
Nucleus® sound processors

Remote Care solutions are part of
Cochlear Connected Care

**The care you
need, when
and where
you need it**

Access to the right hearing care at the right time is important. You may be performing well but would still like your clinician to monitor you and provide care when you need it. However, an in-clinic visit may not easily fit into your schedule and can come with added travel costs.

That's why Cochlear™ Remote Care offers access to care when and where you need it, without a visit to the clinic. Once you have created a Cochlear account, you can use Cochlear Remote Check to complete a hearing review as scheduled by your clinician or Cochlear Remote Assist to have a video appointment.

To use Remote Care, you need to have a compatible Cochlear Nucleus® or Kanso® Sound Processor, and the Nucleus Smart App on a compatible smartphone.*

Cochlear Remote Check

Remote Check is a convenient, at-home testing tool that allows you to complete a hearing review using the Nucleus Smart App on your compatible Apple or Android™ device*, without a trip to the clinic.

Your clinician may ask you to complete a Remote Check as a way of monitoring your progress, or instead of a routine appointment. Your clinician will decide which Remote Check activities they want you to complete and will review your results to see if any follow up is needed.

Completing a Remote Check

- You'll receive an email from your clinician inviting you to do a Remote Check.
- You'll have 30 days to complete the Remote Check.
- Remote Check activities are similar to those you'd go through with your clinician if you were at the clinic.
- Your clinician will provide you with a Remote Check Getting Started Guide that explains each activity in detail.

“Being able to take a test at home of the same quality as the one I would take at the clinic means a lot more freedom.”

Stefan, Cochlear Nucleus System recipient

Continue

15 min

A Remote Check can take as little as 15 minutes to complete^{^,1}

[^] The median time taken to complete all five activities is 20 minutes for a unilateral recipient and 30 minutes for a bilateral recipient. Remote Check is user-driven, so patient related variables may impact the time taken to complete a session.

“Having Remote Check is really convenient, just to pick it up and do it in your own time. I could do it in the evening when the kids were in bed.”

Katie, Cochlear Nucleus System recipient

Cochlear Remote Check

Remote Check activities

Questionnaire: part 1

Complete a questionnaire to provide an indication of your hearing health and needs.

Audiogram

Take a simple hearing test to indicate which soft sounds you can hear.

Speech in noise

Do a listening activity to understand how background noise affects your hearing.

Implant site photos

Take photos of the area where you wear your coil and sound processor, or ask someone to do it for you.

Questionnaire: part 2

Complete the second part of the questionnaire, which relates to listening activities and training.

Implant check

The Nucleus Smart App will automatically check how your implant is functioning, and send the results (along with other relevant device data) to your clinician.

After a Remote Check

Once you have completed the Remote Check, the results will be sent securely to your clinician for assessment. The likely outcomes of a Remote Check are that your clinician:

- is happy with your results and no follow up appointment is needed
- would like to follow up with a Remote Assist session (a scheduled video appointment)
- would like to follow up with a clinic appointment.

Cochlear Remote Assist

Remote Assist enables video appointments between you and your clinician. Using the Nucleus Smart App on your compatible smartphone*, you can access real-time care from your clinician at a convenient time and place, without visiting the clinic. Remote Assist offers a flexible way to receive care without the associated time and travel costs of attending the clinic.

Setting up a Remote Assist session

- Either you or your clinician will set up a Remote Assist appointment in the same way you would schedule a clinic appointment.
- Your clinician will enable Remote Assist in the Nucleus Smart App so you can access it.
- Your clinician will provide you with a Remote Assist Getting Started Guide to help you prepare for the session.

During a Remote Assist session

- At the scheduled time, you join the video call through the Nucleus Smart App.
- During the call, you will be able to talk to your clinician via video and you also have the option of texting them using the Remote Assist chat function.
- During a Remote Assist session, your sound processor will be connected to the programming software used by your clinician. This means they can make adjustments if needed, and the changes will be automatically saved to your sound processor.

The benefits of Cochlear Remote Care

The convenience of care anywhere

Better hearing can help you focus on what's really important. That's why Remote Care offers convenient support from your clinician without a clinic visit, providing the flexibility to receive care at a time and place that suits you. Using your compatible smartphone*, you can access care wherever you are.

Connect with care when you need it

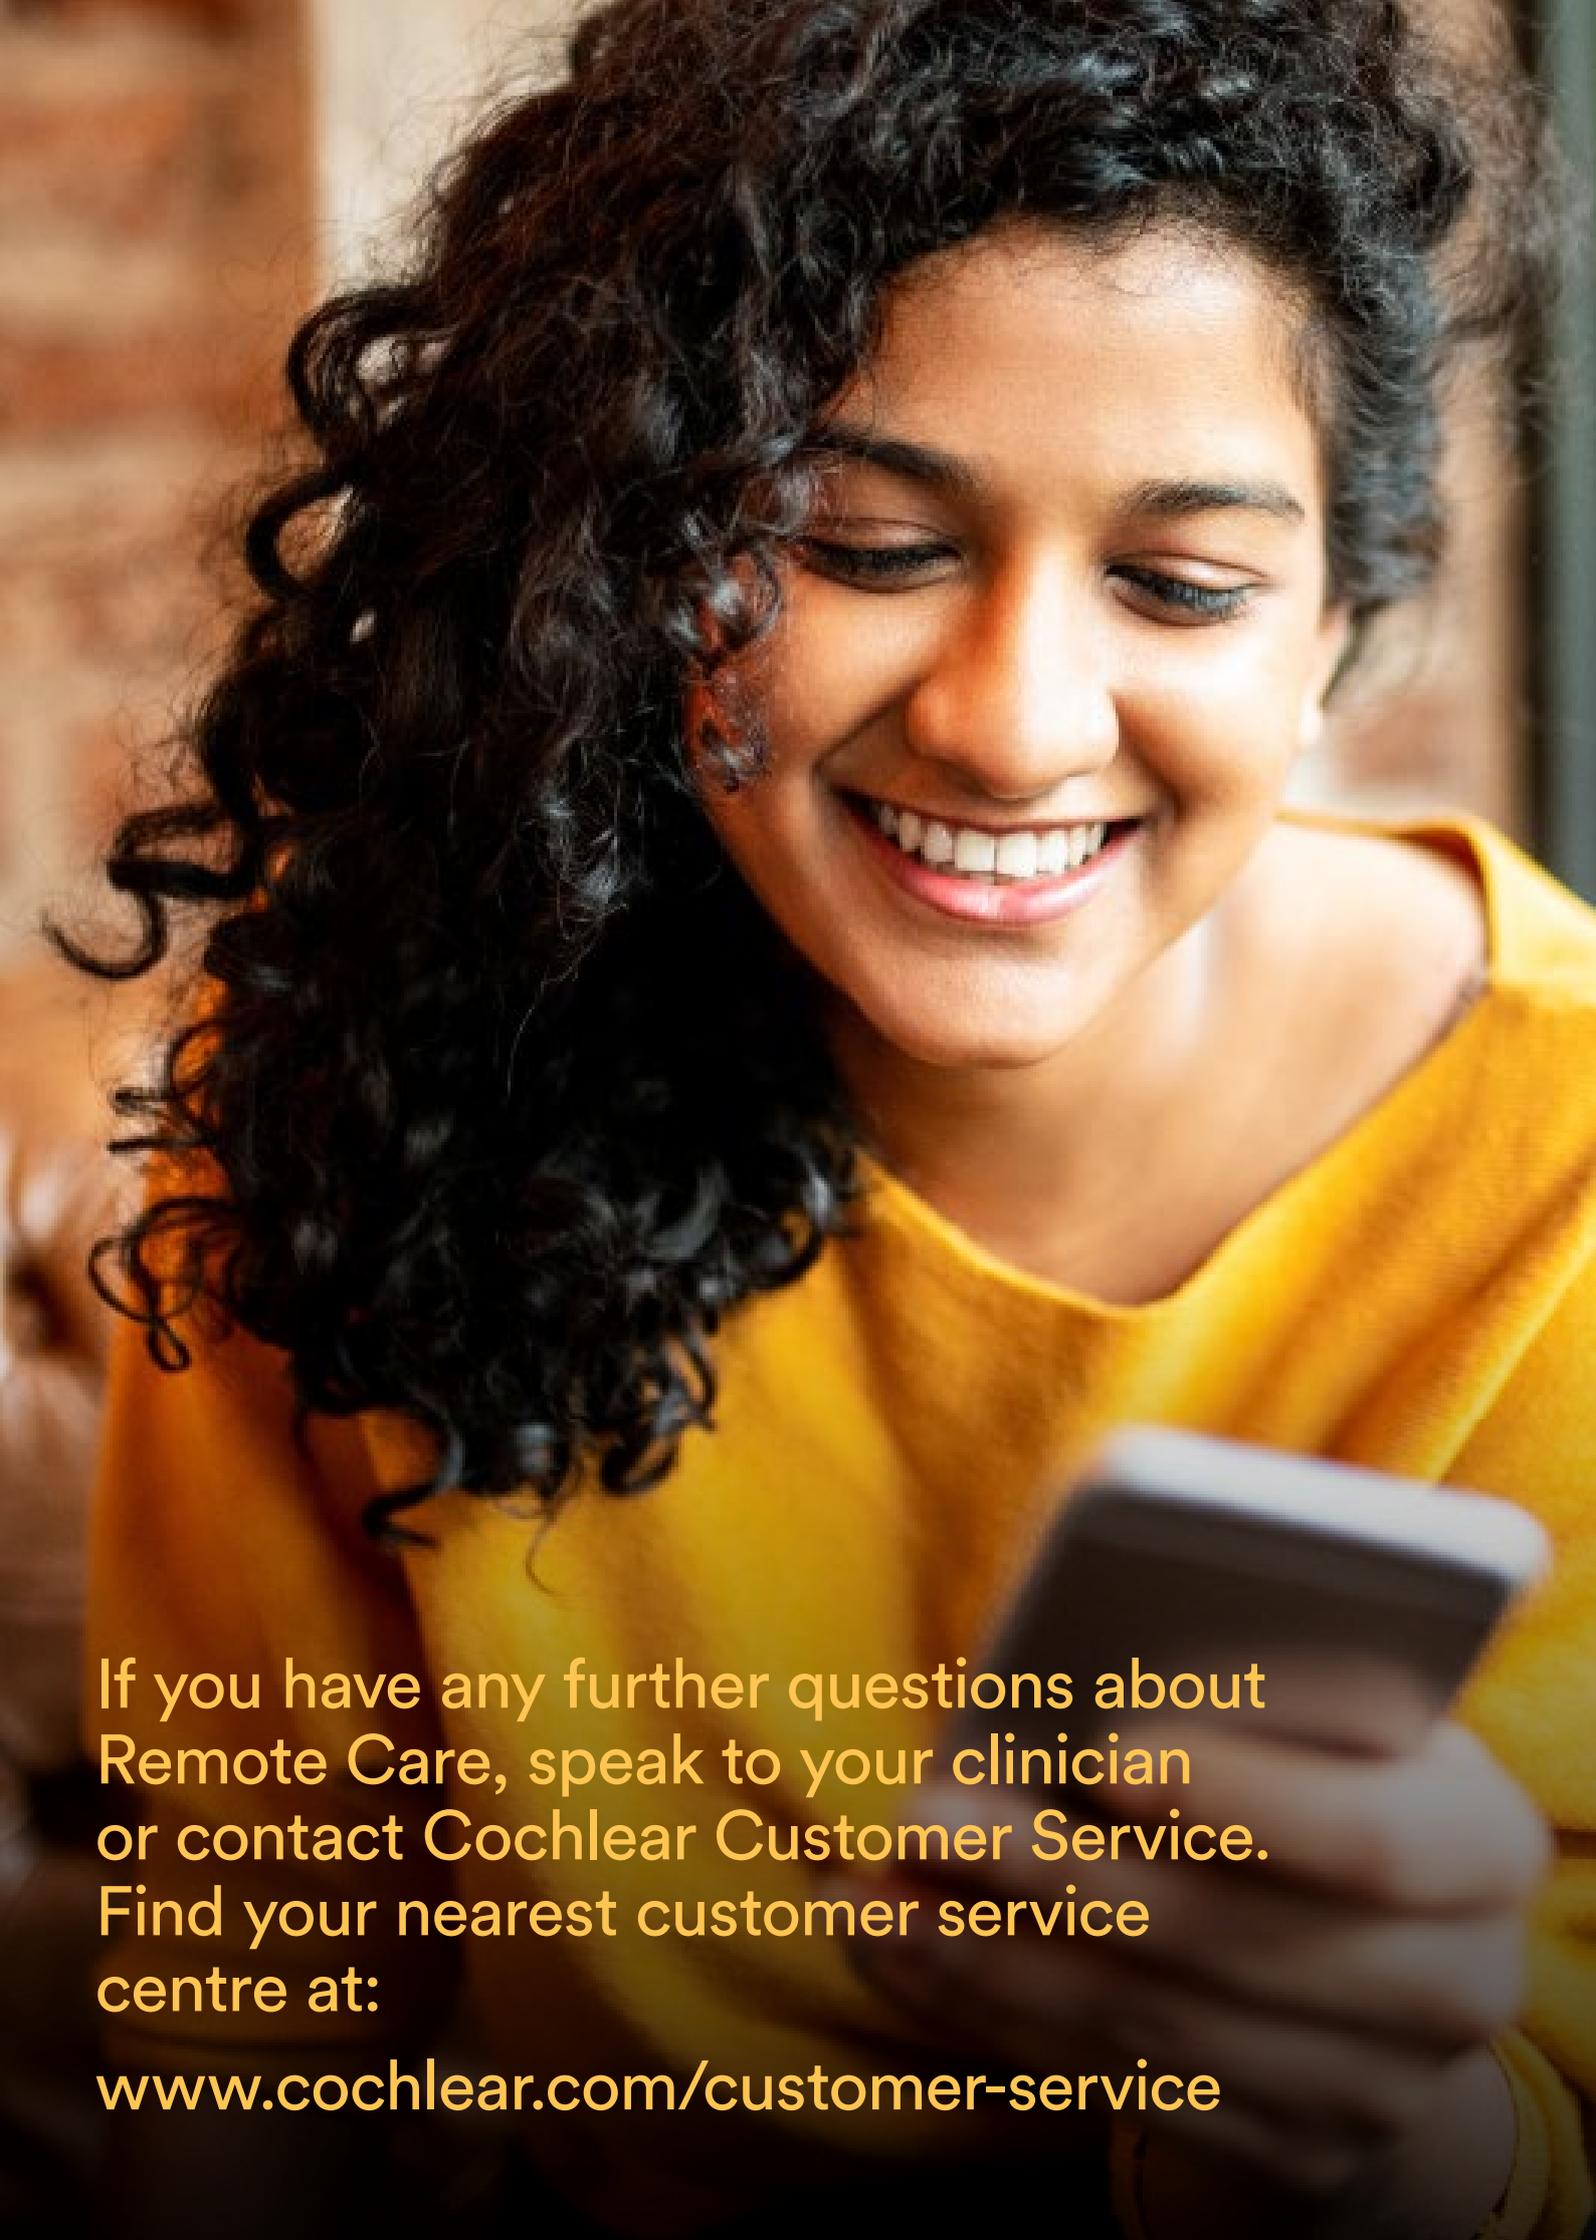

Consistent access to the right hearing care is important as it can help you maintain better hearing. That's why Cochlear Remote Care solutions help your clinician monitor your progress and provide you with the right care at the right time – whether that is a remote check-in, a video appointment, or a visit to the clinic.

The reassurance of quality care

Remote Care solutions have been carefully designed and tested to meet Cochlear's rigorous quality and security standards, so you can confidently access care from your clinician. With Remote Care, your clinician is supported by our extensive programming data and decades of experience as the global leader in implantable hearing solutions.

Innovative and secure care solutions

We understand that expectations and preferences change over time. That's why we use innovative technology to develop new ways of delivering hearing care. With Remote Care, you can securely access quality hearing care without a trip to the clinic using direct streaming and advanced connectivity features of your compatible Nucleus sound processor and the Nucleus Smart App.

If you have any further questions about Remote Care, speak to your clinician or contact Cochlear Customer Service. Find your nearest customer service centre at:
